19
20 As you see, we can make section headers
21 is that we can code inside these documents
22 document.
23 Click "Render" to test to see if your software
24 When coding, we have to tell the computer
25 compile code. Below is an example of a
26 You do not have to understand this
27 set up correctly.
28
29 x <- seq(0,10, length = 100)
30 y <- 2*exp(x)
31
32 plot(x,y, type = "l", lwd=2, col="darkblue")

Console Background Jobs

R 4.4.2 - ~/RData

R is free software and comes with ABSOLUTELY NO WARRANTY. You are welcome to redistribute it under certain conditions. Type 'license()' or 'licence()' for distribution details.

Natural language support but running in an English locale.

R is a collaborative project with many contributors. Type 'contributors()' for more information and 'citation()' on how to cite R or R packages in publications.

Type 'demo()' for some demos, 'help()' for on-line help, or 'help.start()' for an HTML browser interface to help. Type 'q()' to quit R.

[workspace loaded from ~/RData]

AUTHOR
[your name]

Introduction

This type of file is called a "markdown" file. Markdown is like Microsoft Word but much more powerful. This file is made specifically for creating fancy reports and has a file type `.qmd` meaning "Quarto Markdown".

You will become very familiar with these files throughout the semester. For now, it's only necessary to download this file, save it in a sensible folder on your computer or OneDrive, and "run" it.

Clicking on the "Render" button above will create an `.html` document that should open up in your default browser. This `.html` document will be created and saved in the same location as this `TestingTesting.qmd` document.

NOTE: If this document is in your `Downloads` folder, that is also where the `html` file will appear.

As you see, we can make section headers and type regular text. But the power of `.qmd` files is that we can code inside these documents and present our output directly within the document.

Click "Render" to test to see if your software is set up.
